

Hitachi are delighted to offer a newly product approved analogue board (3CR 01836 AFAA, 0086/050457) that offers all the features of the existing analogue board along with the additional feature of being able to connect a K-Type rail contact to an H-Type EAK. The new analogue board offers a fantastic upgrade path to enable the installation of the K-Type rail contact along with its benefits without the cost of upgrading the EAK and it's associated installation costs.

Why upgrade to a K-Type Rail Contact?

- Grinding pattern available to enable rail grinding without removing the K-Type rail contact.
- Pro active obsolescence management.
- K-Type hole positions are the same location as the H-Type outside hole positions. Therefore change over does not require re-drilling.
- Quicker and Easier to install.
 - No Mechanical adjustment required. Electrical adjustment only
 - The K-Type Rail Contact can be Clamped
 - Protective hose is factory fitted
